

BREACH DETECTOR™

- Unlimited Simultaneous Testing of Multiple Gloveports
- Ergonomic Design
- Fire Retardant Aluminum Back Plate
- Easy-to-Use
- Cost Effective
- Available in Any Port Size or Shape

Newest innovation in
Glovebox Glove Leak Detection

Michael Cournoyer, PHD
Installing a Breach Detector™

Breach Detector™

MRI Enterprises, LLC.

In-Situ Passive Leak Detector for
Glovebox and Isolator Gloves

The Breach Detector™ is the newest innovation in the detection of glove breaches. Based on an exclusively licensed technology developed at Los Alamos National Laboratories, the Breach Detector™ enables monitoring of gloves for breaches at any time the glovebox is not in use. Vastly superior to traditional visual inspections and cumbersome, expensive testing units. The Breach Detector™ provides the user a quick, easy way to help test the integrity of the gloves in each port. Breach Detector™ is ideal for glove ports in any industrial applications which use gloveboxes and isolators with negative pressure. Protect your workers and your products with Breach Detector™.

***Also available with Tungsten coating to provide shielding in radiological applications. Call us for more details.**
